What We Use

001

HTML

002

CSS

003

JavaScript

004

Local Storage

THE PLAYERS

HTML

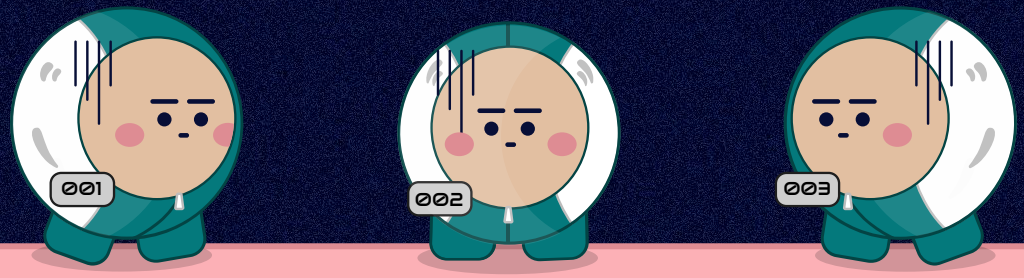
We use HTML to make the basic website

We use the CSS to make the animation and the design of the webpage

CSS

Java Script

JavaScript is used for making all the button and animation works



GAME RULES

Objective

You need to arrange the number on the left side of the page into the box, and choose the correct operator by clicking the white button, so that the result of the number must be equal to the display number.

- You can only drag and drop 1 number on each box
- When you think that you are done you can press the equal(=) button.
- You don't have to fill all the empty boxes.
